RIVERVIEW ORCHIDS

GREENHOUSES - ANDERSON BOULEVARD
EAST LIVERPOOL, OHIO

HOME OF RIVERVIEW ORCHIDS

OHIO'S LARGEST ORCHID GROWERS

HE Special Offerings contained in this catalog are mostly of very easy culture and are all capable of being undertaken by amateurs who achieve success with any other class of plants.

Practically all the literature upon the culture of orchids comes from English sources, and as the climate is very different, the results are more often harmful than beneficial. For this reason, we have devoted a section of this catalog to practical information upon the growing of orchids.

Orchids are ideal for city dwellers, as orchids should not be exposed to the sun. They are also extremely satisfactory for small collections, as their lasting qualities while in bloom are superior to those of other plants. Blossoms can be counted on to last from two weeks to two and three months on the plants in perfection. As there are so many varieties, a comparatively small collection will furnish blooms throughout the year. We know of no other genera which will do this. The colors and charm of orchids defy description. Their individuality must be actually seen to be appreciated.

While the rare and expensive ones have had a great deal of publicity, they represent a mere fringe in this great family, which produce almost every flower-form and color. A very wide variety of beautiful and exotic blooms can be had in even a very small greenhouse at prices ranging from \$3 to \$25.

We extend a cordial invitation to visit our orchid range of fourteen greenhouses where you will see over 50,000 orchid plants growing and blooming.

RIVERVIEW GREENHOUSES

WHY RIVERVIEW'S SEEDLINGS ARE THE BEST!

THE PRIDE and joy of the Riverview Greenhouses' orchid range is its unusually fine collection of stud plants.

The Riverview orchid range is the largest orchid growing establishment in the State of Ohio, but even more important is the fact that its collection of stud plants is rated as one of the best in the United States.

By keeping this in mind, you can understand why Riverview can and does offer you the best in orchid seedlings, as these healthy sturdy seedlings are the offsprings of our collection of stud plants.

The stud plants were and are selected with the view of obtaining hybrids of perfection in form, color, texture and size combined with the characteristics of high productivity and strong growing qualities of plants.

The regulation of the blooming dates and the history of the plants' ancestors also are important determining factors in the mating of these stud plants.

From the time the seed is sown and germination begins, these hybrid seedlings are given the care and attention that a good mother devotes to her babies. These tiny plants are kept in a special room equipped to provide at all times a warm even temperature and the correct humidity. They are kept clean and well-watered after passing the flask stage.

Even the potting is done by workers whose long experience with orchids and osmunda fibre rate them as experts in the important field of potting. The osmunda fibre used is a careful blend from peat collected in various sections of the country to insure better growing conditions of the seedlings.

The strongest and healthiest survivors among thousands of seedlings are offered to you at reasonable prices and with the guarantee that they if given proper care will mature and produce blooms that will more than meet your expectations in beauty.

Riverview, not content with just providing the best quality of orchids, also provides expert packers to handle these valuable plants for your orders. This will insure you that your plants will arrive in perfect condition.

When buying seedlings, remember it's the stud plants that count plus adequate care and attention. To be sure of purchasing the best in seedlings, always buy from the Riverview Greenhouses, the home of fine stud plants and their offspring.

We also offer orchid enthusiasts the opportunity to purchase backbulbs and divisions from our stud plant collection.

To our many friends in Hawaii, Puerto Rico and other overseas countries we recommend that they specify for airmail shipments of their plants when placing orders with us.

We will pack the plants in special paper pots for such shipments. The new air mail rates allow shipping costs to be reduced considerably. You will find this service to be faster and more satisfactory than air express, although of course, we will ship by any method you specify.

Air express rates are approximately 20 to 25 per cent of the total order. As all overseas air express shipments must be prepaid we request that express charges be included with the check for the plants. Should the rate be less, a refund will be made at once, and if the charges exceed the amount sent, we will send a statement to that effect.

Orchid growing is not a new experinece, nor a sideline, but is the main part of Riverview Greenhouses. We have been growing orchids since 1929 and through the years have built a valuable collection of plants which we feel is equal in quality to the finest collection in the United States. We have made Riverview a home of fine orchids. We know you will agree with us if you visit our establishment.

Charles Bosco, one of the proprietors, gives daily attention to Riverview's outstanding large stud plant collection.

6-INCH STUD PLANTS

For the first time in our history we are offering some of our very choicest fine quality orchid plants from our unusually good collection of stud plant, equal to the finest available. This represents a wonderful opportunity to all those who are interested in hybridizing.

Listed below are both five and six inch plants. They are vigorous, strong, growing plants that will produce blooms that are perfection in beauty because of their coloring, texture, size and form. The plants themselves are strong growing.

(These are all stud plants in six-inch pots)

PLANT	Blooming Sason	Price
C. Gregorio, yellow petals, very dark lip, good texture and form, extra fine stud plant, strong growing, has produced some remarkable seedlings - - - -	Summer	\$75.00
C. Tityus, very dark flower, good texture, fine form,excellent for crossing, strong growing vigorous plant, excellent stud plant - - - - -	Variable	75.00
C. Eleanor Alba x Lc. Schroenerae Alba, very large flower, pure white with dark beautiful lip, good texture, one of our better stud plants - - - - -	Fall	100.00
C. Talisman, reddish cast, very dark, fine form, very beautiful lip, very heavy textured, has produced excellent seedlings, considered one of our very best stud plants - - - - -	Fall	100.00
C. Labiata, very large flowers, proven stud plant, has produced some very good seedlings, the flower is very heavy textured, has good form, medium in color.	Fall	75.00
C. Enid, very large flowers, medium in color, extra fine lip, strong grower, good producer, excellent stud plant -	Fall	75.00
C. Maggie Raphael x C. Trienastiana, definatey one of our best stud plants, blooms are medium sized, very dark with very dark well shaped lip, unusually good form, good texture, good ofr darkening other orchids, we have used it repeatedly and have received some very good seedlings - - - - -	Fall, winter	100.00

PLANT	Blooming Season	Price
C. Mt. Royal, also excellent stud plant, very dark beautiful lip, medium colored petals, good producer, strong grower, one of our best stud plants, fine texture and form - - - - -	Fall	100.00
Bc. Goliath x Lc. Locarno, very heavy textured, very good keeper, very dark, large flower, beautiful dark lip, good form, strong plant, considered one of our best - - - - -	Fall, winter	125.00
Bc. Digbyana x Lc. Soulangé, very heavy textured, very beautiful dark lip with yellow eyes, good keeper, dark petals sepals, large flower, good form - - -	Fall, winter	125.00
C. Trianae x Lc. Locarno, also very dark and very heavy textured, good form, well shaped dark lip with yellow eyes, dark sepals and petals, strong growing plant - - - - -	Winter	100.00
C. Suzanne Hye de Crom x White Empress, beautiful pure white flower, large, well shaped lips, yellow throat, has produced very good seedlings, one of our choicest whites - - - - -	Winter, spring	125.00
C. Mossiae, dark, with very well-shaped lip, good texture and form, proven stud plant, has produced many excellent seedlings - - - - -	Spring	75.00
C. Trianae, medium color with extra large dark lip, large flower, good producer, also a proven stud plant that has produced many very good seedlings - -	Winter	75.00
Lc. Aphrodite Alba x C. Mendelii Alba, white winged, very dark well-shaped lip, large flower, good texture - - -	Winter, spring, early summer	75.00
Lc Radiance, one of our darkest Cattleyas, medium size, beautiful flower, good texture, excellent stud plant to add color to other orchids, has produced some very good seedlings, for is excellent -	Spring	125.00
C. Prince Schimadzu Alba, very excellent for stud purposes, pure white wings, extra nice dark lip, medium size flower, heavy textured - - - - -	Summer	125.00
Lc. Callistoglossa, very good form, very dark with beautiful lip, large flower, strong growing plant - - - - -	Summer	75.00

PLANT	Blooming Season	Price
C. Trianae Alba, medium sized, very good light lavender lip, strong growing plant, good texture and form - - -	Winter	75.00
White Schroederae, white winged, nice shaped lip, yellow throat, medium sized and good texture - - - - -	Spring	50.00
C. General Pultney, very dark, extra large dark lip, Christmas bloomer, very heavy textured, one of our favorite stud plants - - - - -	Christmas	75.00
C. Nebo, large medium color flower, very good lip and good form, plant is strong grower, good producer - - - - -	Winter	75.00
C. Estelle, very beautiful pure white, very heavy textured, good keeping bloom, has extra fine lip and golden yellow throat, also good form, plant is strong growing - - - - -	Winter	125.00
C. Gigas FMB x C. Hardwana Alba, extra large, pure white wings, very wide sepals and petals, unusually good form, large beautiful dark lip with prominent pellow eyes. Truly a beautiful bloom. Plant is good producer, strong growing and vigorous - - - - -	Summer	125.00
C. Eleanor Alba x C. Aurea, extra large flower, pure white wings, wide sepals and petals, beautiful large dark lip and yellow eyes in throat. Strong growing vigorous plant. Very good stud plant -	Summer, fall	100.00
Lc. Eximea x C. Gigas, very dark, good lip, large flower - - - - -	Summer	50.00
Lc. Canhamiana, medium color and medium size with dark lip and yellow throat	May, June	50.00
C. Ballantineana x C. Dupreana, very large bloom with good dark lip. Sturdy plant, heavy textured flowers - - -	Summer	75.00
C. Princess Royal Alba x C. Empress Frederick Alba, pure white wings with beautiful dark lip, well shaped. Flower is large with wide sepals and petals. Has produced some very good seedlings - - - - -	Summer	100.00

PLANT	Blooming Season	Price
C. Trianae x Lc. Tartan, fairly large flowers, medium colored sepals and petals with very, very dark well shaped lip, and yellow eyes in the throat, strong growing plant, one of our choice stud plants - - - - -		
Lc. Rabiana, very dark good lip, large flower, nice wide sepals and petals, fair producer - - - - -	Summer	50.00
C. Intertexta, very dark with very good dark lip. Strong vigorous plant, heavy textured flower, considered very good stud plant - - - - -	Variable	75.00
L. Purpurata x C. Gaskelliana, medium colored, with very good lip, fair sized bloom, strong plant - - - - -	Summer	50.00
C. Edithiae, very beautiful large pure white, wide sepals and petals with very beautiful well formed white lip and yellow throat. One of our very best white orchids for hybridizing. Has produced some very outstanding seedlings - - - - -	Winter	125.00
Bc. Maroniae x Lc. Ishtar, large flower, very fine variety, extra dark in color with well shaped lip, strong grower, vigorous plant - - - - -	Fall, winter	100.00
Lc. Cantab x Lc. Serbia, very highly colored, very rich gold in throat, fair-sized flower, heavy textured, strong grower - - - - -	Variable	100.00
Suzanne Hye de Crom, pure white, large flower, large beautiful lip, excellent stud plant - - - - -	Variable	100.00
H. T. Pitt, large flower, medium color, dark lip, strong growing plant - - -	Winter	75.00
C. Mrs. Goldfarb, pure white with beautiful lip and yellow throat, large flower, one of our choicest stud plants - - -	Fall	100.00
C. Goderic, medium color sepals and petals with extra large dark lip, strong growing plant, good producer - - -	Easter	75.00
C. Prince Schimadzu, very dark wide sepals and petals with very dark large beautiful lip. Definitely one of our best stud plants - - - - -	Fall	100.00

PLANT	Blooming Season	Price
L. Purpurata Alba, extra large flower, very good form, extra fine stud plant, has good dark lip, white winged - -	Spring	75.00
Lc. Sargon x C. Mossiae, very fine large flower with dark lip and yellow eyes -	Easter	75.00
C. Mendelli Alba, medium sized flower, good texture, nice form, very dark lip, white winged - - - - -	Spring	75.00
Lc. Aphrodite Alba, very large blooms, white winged, good texture and form, very dark lip, plant strong grower and has produced some very excellent seedlings - - - - -	Spring	125.00
C. Kienestiana x C. Gigas, medium color petals and sepals, very dark beautifully shaped lip with yellow eyes, very heavy texture and fine form. Highly recommended as a stud plant - - - - -	Summer	75.00
C. Princess Royal Alba x C. Empress Frederick Alba, white winged with very dark lip and yellow eyes, large flower with wide sepals and petals and very good form and texture, strong growing plant - - - - -	Summer	100.00
C. Enid x C. Gigas, very large flower with extra large beautiful lip, good form and heavy texture, medium colored sepals and petals, fairly dark lip - - - - -	Summer	75.00
C. Kienestiana x C. Jacquinette, very heavy textured, large flowers, large beautiful lips, fine form, very good as a stud plant. - - - - -	Fall, winter	100.00
C. Fabia, very dark with good lip, medium size, good form and texture, very strong growing plant - - - - -	Fall	75.00

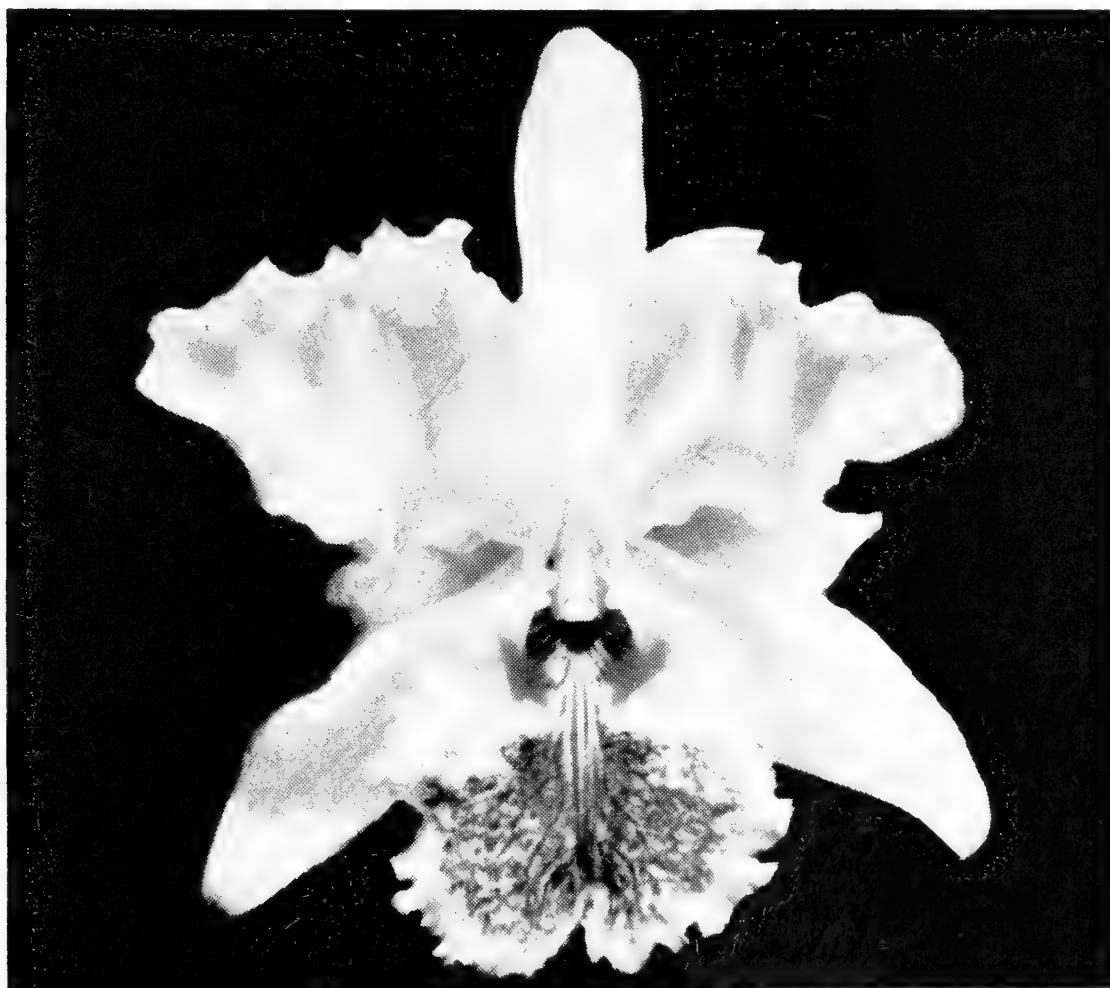

5-INCH STUD PLANTS

PLANT	Blooming Season	Price
C. Enid x C. Gigas, very large flower with extra large beautiful lip, good form and heavy texture, medium colored sepals and petals, fairly dark lip - -	Summer	\$50.00
C. Edithiae, very beautiful large pure white, wide sepals and petals with very beautiful well formed white lip and yellow throat. One of our very best white orchids for hybridizing. Has produced some very outstanding seedlings - - - - -	Winter	125.00
C. Suzanne Hye de Crom x C. White Empress, beautiful pure white flower, large well shaped lip, yellow throat, has produced very good seedlings, one of our choicest whites - - - - -	Winter	75.00
Lc. Violetta, large flower, medium colored wide petals and sepals with fine very dark lip, fine form, very heavy textured, strong growing plant, good producer - - - - -	Summer	40.00
Bc. Digbyana x Lc. Soulangue, very heavy textured, very beautiful dark lip with yellow eyes, good keeper, dark petals and sepals, large flowered, good form -	Fall, winter	75.00
Bc. Goliath x Lc. Locarno, very heavy textured, very good keeper, very dark large flower, beautiful dark lip, good form, strong plant, considered one of our best - - - - -	Fall, winter	75.00
C. Trianae, medium color with extra large dark lip, large flower, good producer, also a proven stud plant that has produced many very good seedlings -	Winter	35.00
C. Mossiae, dark with very dark well-shaped lip, good texture and form, proven stud plant, has produced many very good seedlings - - - - -	Spring	35.00
Lc. Schroederae, very light with rich yellow throat, well formed lip, medium sized flower, nice texture - - - - -	Spring	35.00
C. Mendelii Aba, medium sized flower, good texture, nice form, very dark lip with pure white wings - - - - -	Spring	40.00

PLANT	Blooming Season	Price
C. Trianae x Lc. Locarno, very dark and very heavy textured, good form, well shaped dark lip with yellow eyes in throat, dark sepals and petals, strong growing plants - - - - -	Winter	50.00
C. Eleanore Alba x Lc. Schroederae Alba, very large flower, pure white with beautiful dark lip, good texture, one of our better stud plants - - - - -	Fall	50.00
C. Talisman, reddish cast, very dark, fine form, very beautiful lip, very heavy textured, has produced excellent seedlings, considered one of our very best stud plants - - - - -	Fall	50.00
C. Labiata x C. Fabia, medium sized flower, very dark, heavy textured, fine from, very beautiful lip - - - - -	Fall	50.00
C. Eleanore Alba x C. Aurea, extra large flower, pure white wings, wide sepals and petals, beautiful large dark lip and yellow eyes in throat. Strong growing, vigorous plant. Very good stud plant -	Summer, fall	50.00
C. Gigas FMB x C. Hardyana Alba, extra large, pure white wings, with very large very beautiful dark lip with prominent yellow eyes, very wide sepals and petals, unusually good form. Truly a beautiful bloom. Plant is good producer, strong growing and vigorous -	Summer	50.00
C. Tityus x C. Trianae the Globe Alba, very large flower, pure white winged with very large and very beautiful dark lip fringed with white, also yellow throat. Very beautiful flower, one of our very best white stud plants - -	Winter	50.00
C. Enid, very large flowers, medium in color, extra fine dark lip, strong grower, good producer, excellent stud plant -	Fall	40.00
C. Kenestiana x C. Jacquinette, very heavy textured, large beautiful flowers, large beautiful lips, fine form, very good as a stud plant - - - - -	Fall, winter	100.00
Lc. Eximae x C. Gigas, very dark, good lip, large flower, good texture - - - - -	Summer	35.00

PLANT	Blooming Season	Price
C. Princess Royal Alba x C. Empress Frederick Alba, pure white wings with beautiful dark lip, well shaped. Flower is large with wide sepals and petals. Has produced some very good seedlings - - - - -	Summer	50.00
C. Trianae x C. Veness (C. Clotho), fair sized flower, medium color with good dark lip, good texture, strong vigorous plant - - - - -	Winter	40.00
C. Trianae x C. Peetersii, heavy textured, medium color with dark lip. An excellent stud plant. Strong growing and good producer - - - - -	Summer	40.00
Mrs. Harold Lloyd, very large flower of heavy texture, good dark lip, fine form, Excellent for hybridizing - - - - -	Summer	40.00
Lc. Navaho, very dark in color, wide sepals and petals, medium size, well shaped lip, fine form, good keeping flower - - - - -	Variable	40.00
C. Trianae x Lc. Dominiana, medium color, medium sized, has good dark lip, nice form and good texture - - - - -	Winter	40.00
Lc. Rosalind, medium sized heavy textured flower, medium colored sepals and petals with extra fine dark lip and yellow throat. Strong growing plant - - -	Variable	40.00
C. General Pultney, very dark, extra large dark lip, very heavy textured, one of our favorite stud plants, has produced some excellent seedlings - - - - -	Christmas	50.00
C. Mt. Royal, also excellent stud plant, very dark beautiful lip, medium colored petals, good producer, strong grower, one of our best stud plants, fine texture and form - - - - -	Fall	60.00
Lc. Fascinator, very light lavender petals and sepals with medium lavender lip. Very heavy textured, good keeper, very good producer, very good form - - -	Spring, early sum.	35.00
C. Prince Schimadzu, very dark wide sepals and petals, with very dark large beautiful lip. Definitely one of our best stud plants - - - - -	Fall	75.00

PLANT	Blooming Season	Price
C. Prince Schimadzu Alba, very excellent for stud purposes, pure white wings, extra nice dark lip, medium size flower, heavy textured - - - - -	Summer	75.00
C. Trianae x Lc. Hassalii, medium sized flower, medium colored sepals and petals with very dark well shapel lip, good texture and form - - - - -	Winter	50.00
C. Suzanne Hye de Crom x C. White empress, beautiful pure white flower, large, well shaped lip, yellow throat, has produced very good seedlings, one of our choicest whites - - - - -	Winter, spring	75.00
C. Trianae x Lc. Tartan, fairly large flowers, medium colored sepals and petals with very, very dark well shaped lip and yellow eyes in the throat, strong growing plant, one of our choice stud plants - - - - -	Winter	60.00

4-INCH STUD PLANTS

The following is a special offer for those interested in obtaining divisions from plants of our unusually good collection of stud plants, equal to the finest available. Listed are four-inch established backbulbs from stud plants whose blooms are perfection in beauty because of their coloring, texture, size and form. The plants themselves are vigorous and strong growing.

VARIETIES

PLANT	Blooming Season	Price
C. Goderic, medium sized flower, medium colored petals and sepals, very dark well shaped lip, heavy textured, good form, strong growing, vigorous plants	Easter	\$35.00
C. Mossiae x C. Trimos, very strong grower, good producer, medium sized flowers, medium colored sepals and petals with fine dark lip, good texture - -	Spring	35.00
Bc. Goliath x Lc. Locarno, very heavy textured, 'very good keeper, very dark, large flower, beautiful dark lip, good form, strong plant, considered one of our best - - - - -	Winter	40.00
Bc. Albion, very large pure white hybrid, very heavy textured, good form, large beautiful lip, strong growing, vigorous plant, has very good keeping qualities, highly recommended for hybridizing purposes - - - - -	Variable	50.00
C. Mendelii Alba, very large blooms, white, winged, good texture and form, very dark lip, plant strong grower -	Spring	25.00
C. Trianae Alba, medium sized, very good light lavender lip, strong growing plant, good texture and form - - -	Winter	25.00
C. Mossiae, dark with very dark well-shaped lip, good texture and form, division from proven stud plant, has produced many excellent seedlings - -	Spring	20.00
C. Trianae, medium color with extra large dark lip, large flower, good producer, division from a proven stud plant that has produced many very good seedlings - - - - -	Winter	20.00

PLANT	Blooming Season	Price
C. Percivaliana, large flower, very dark with a good dark lip, a very good Percivaliana stud plant division - - -	Christmas	20.00
C. Princess Royal Alba x C. Empress Frederick Alba, pure white wings with beautiful dark lip, well shaped. Flower is large with wide sepals and petals -	Summer	30.00
C. Eleanore Alba x C. Aurea, extra large flower, pure white wings, wide sepals and petals, beautiful large dark lip and yellow eyes in throat. Strong growing vigorous plant. Very good stud plant division - - - - - - - - - -	Summer	30.00
C. Gigus FMB x C. Hardyana Alba, extra large, pure white wings, very wide sepals and petals, unusually good form with very large and beautiful dark lip with prominent yellow eyes. Truly a beautiful bloom. Plant is good producer, strong growing and vigorous.	Summer	30.00
C. Enid, very large flower, medium in color, extra fine dark lip, strong grower, good producer, excellent stud plant division - - - - - - - - - -	Fall	20.00
C. Tityus x C. Trianae the Globe Alba, very large flower, pure white winged with very large and very beautiful dark lip fringed with white, also yellow throat. Very beautiful flower, one of our very best white stud plant divisions - - - - - - - - - -	Winter	50.00
C. Edithiae, very beautiful large pure white, wide sepals and petals with very beautiful well formed white lip and yellow throat. One of our very best white orchids for hybridizing - - -	Winter	30.00
Dowiana var. Rosita, wide yellow petals and sepals with very dark throat, good form and heavy textured. Strong growing vigorous plant, good producer -	Fall	25.00
C. Mt. Royal, also excellent stud plant, very dark beautiful lip, medium colored petals and sepals, good producer, strong grower, division from one of our best stud plants, fine texture and form - - - - - - - - - -	Fall	20.00

PLANT	Blooming Season	Price
C. Trimos, medium sized flower, medium in color with good dark lip, very nice form and good texture, strong growing, good producer - - - - -	Winter, spring	25.00
C. Nebo, large medium color flower, very good lip and good form, plant is strong grower, good producer - - - - -	Winter	25.00
C. Trianae x Lc. Hassalii, medium sized flower, medium colored sepals and petals with very dark well shaped lip, good texture and form - - - - -	Winter	30.00
Lc. Sargon x C. Mossiae, very fine large flower with good dark lip and yellow eyes in the throat - - - - -	Easter	30.00
C. Maggie Raphael x C. Ballentineana, large flower, large well shaped dark lip, medium petals and sepals, good heavy texture, very good plant for hybridizing purposes, strong growing good producer - - - - -	Fall	30.00
Lc. Violetta, large flower, medium colored wide petals and sepals with fine very dark lip, fine form, very heavy textured strong growing, good producer -	Summer	20.00
Lc. Eximea x C. Gigas, very dark, good large flower, heavy texture - - - - -	Summer	20.00
C. Gregorio, yellow petals, very dark lip, good texture and form, extra fine stud plant, strong growing - - - - -	Summer	25.00
C. Intertexta, very dark with very good dark lip. Strong vigorous plant, heavy textured flowers, considered very good for hybridizing - - - - -	Variable	20.00

Transplanting seedlings from flasks at Riverview. 75,000 were transplanted last year.

SEEDLINGS IN FLASKS

The following crosses are among the finest available. Each 500 c. c. flask contains from 200 to 400 seedlings which are ready for transplanting into community pots. These are being offered at very good value to anyone who wishes the experience of raising the young seedlings. The crosses are as follows:

A view of Riverview's large community pot house. Charles Bostwick, seedling grower, seen watering plants.

4½-INCH SIZE COMMUNITY POTS

These select seedlings are in four and one-half inch community pots. The plants are an inch and one-half to two inches high. Each pot contains from 45 to 50 seedlings and are sold as a single unit.

These seedlings were made from our choicest stud plants and should produce some very outstanding flowers for commercial and show purposes. They can be transplanted into individual pots this summer. The following varieties are among the finest available.

VARIETIES

(Alba means white petals with colored lip)

Name and Description	Blooming Season	Price
C. Mossiae x C. Trianae, medium color, dark lip - - - - -	Spring	\$20.00
C. Labiata x (Lc. Massasoit x C. Fabia), very dark - - - - -	Autumn	25.00

A house of *C. Mossiae* in bloom during Easter Week

FOUR INCH BACK BULBS

There are decided advantages in purchasing established back-bulb propagations of fine flowering quality. We propagate from only strong growing stock and selected flowering types. A propagation will flower in from one to three years and is priced considerably lower than unproved seedling stock of comparable size.

Propagations represent a better investment than seedlings for the following reasons:

1. Proven quality flowering stock.
2. Selected strong growing strains.
3. Price.

SPECIAL OFFERINGS OF 5-INCH BLOOMING SIZE HYBRIDS

The plants listed below are of flowering size in pot sizes approximately 5 inch with four to seven bulbs. If you have no specific variety preference, we would suggest that you let us make up the selection for you, as we can choose strong growing plants that will bloom at various times during the year and we can give you a variety of color. However, if you prefer, you may make your own selection and it will receive our very careful attention.

SPECIAL OFFERING OF SPECIES

The following varieties of species are being offered at very good value. The plants are good strong ones that will produce very good flowers. This is an excellent investment for beginners.

VARIETIES

- C. Mendelii, specie from Colombia, Spring flowering.
- C. Gaskelliana, species from Venezuela. Early summer flowering.
- C. Gigas, species from Colombia. Summer flowering.
- C. Labiata, species from Brazil. Fall flowering.
- C. Mossiae, species from Vanezuela. Spring flowering.
- C. Percivaliana, species from Colombia. Winter flowering.
- C. Trianae, species from Colombia. Winter flowering.
- C. Schroderae, species from Colombia. Spring flowering.
- C. Skinnerii, species from Guatemala. Spring flowering.
- C. Bowringean, species from Brazil. Fall flowering.

Prices: 4 inch—\$4.00 each or 25 for \$90.00
5 inch—\$6.00 each or 25 for \$125.00
6 inch—\$8.00 each or 25 for \$175.00
Assorted sizes and varieties, 25 for \$125.00

SPECIAL OFFERING OF C. MOSSIAE AND C. TRIANAE

These plants have been potted this year and with good attention should produce a lot of flowers.

6 inch—\$7.00 each or 25 for \$160.00

SPECIAL OFFERING OF C. SPECIOSISSIMA

Very good variety, 5 inch—\$6.00 each, 25 for \$125.00

6 inch—\$7.50 each, 25 for \$175.00

All flowering plants.

NEW IMPORTATIONS OF C. MOSSIA, C. CASKELLIANA AND C. PERCIVILIANA

5 inch—\$ 6.00

6 inch—\$10.00

Orchard Peat—As collected, per bag, \$3.50.

ASSORTED, UNESTABLISHED, UNPOTTED HYBRIDS BACK-WITH NEW EYES SHOWING:

Colored, \$1.50 each

White \$2.00 each

Assortment including some white, 50 for \$60.00

THESE ARE FROM OUR OWN FLOWERING VARIETIES.

Josephine Skawinski and Harold Stansberry packing plant orders for shipment.

ASSORTMENTS FOR THE BEGINNERS

As a special offer to beginners we are offering a good selection of mature flowering size plants that will bloom in good marketing seasons. This offer represents an exceptionally good investment in quality and value for the dollar because the selection includes not only good flowering species but also hybrids from our own flowering varieties.

28 species of plants in seven varieties averaging six bulbs and five to six inch pots and 12 hybrid plants of good selection, unlabeled, averaging five bulbs and five-inch pots.

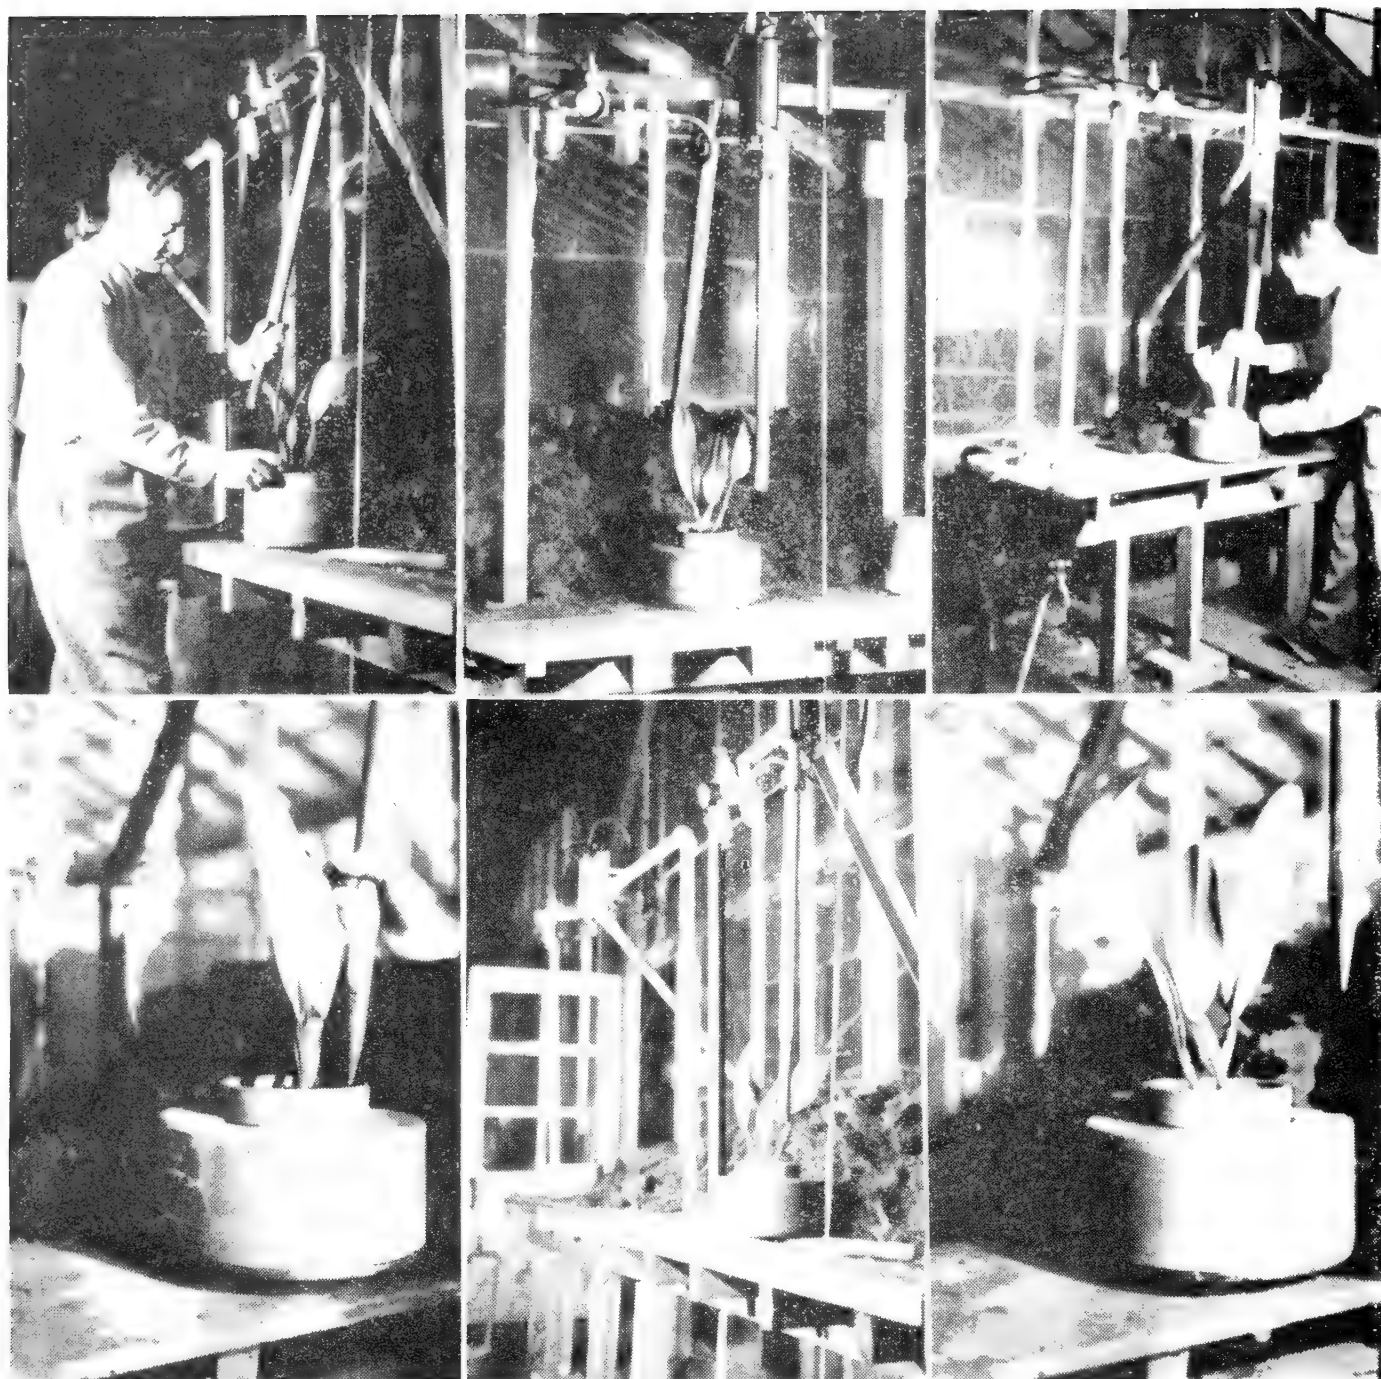

Total of 40 plants—\$195.00

14 species plants in five varieties averaging six bulbs and five to six inch pots AND 6 hybrid plants of good selection, unlabeled, averaging five bulbs and five-inch pots.

Total of 20 plants—\$97.50
labeled,

The species varieties include:

- C. Trianae—early winter, lilac to purple variable.
- C. Mossiae—early spring, lilac to crimson, free flowering.
- C. Skinnerii—spring, deep lavender in color.
- C. Gaskelliana—early summer, rose to purple.
- C. Percivaliana—Christmas, rose to crimson.
- C. Schroederae—early spring, apple blossom coloring.
- C. Gigas—summer flowering, large dark bloom.

NOW....YOU CAN HAVE TWELVE TO FIFTEEN *Perfectly* POTTED ORCHIDS PER HOUR

*Here is an orchid-potting machine which has been PROVEN
in actual greenhouse operation*

Shown in these pictures is a practical orchid potting machine that has been checked, tested and approved in actual greenhouse operation. This is the "Pneumo-Potter," a simple, sturdily-designed orchid-potting machine that has demonstrated its ability to do the work.

First used in December 1945, the Pneumo-Potter has been thoroughly tested and has been found, under normal commercial greenhouse conditions, to pot 12 to 15 orchids per hour compared to the average production of 5 per hour of the average hand potter. At a minimum, that's a production

increase of 170% per man, at no increase in labor costs.

Priced at \$198.50, the Pneumo-Potter can be one of the most profitable investments you can make. It will pay you to investigate this machine thoroughly and see how it can reduce your own orchid-potting costs. The Pneumo-Potter will enable you to reduce costs of orchid-potting enough to pay for itself in a relatively short time.

Write now for complete description of the machine —how it is made, and how it works, plus a list of present users of the Pneumo-Potter.

INFORMATION AND CULTURAL NOTES ON THE GROWING OF ORCHIDS

Orchids comprise a vast family of which over 15,000 species are now known, while the hybrids which have been raised in the last ten to twenty years are almost innumerable. Many of them produce exquisitely beautiful flowers of great lasting quality and are of easy culture. If treated in a commonsense manner, they are by far easier to grow than a great many other plants, provided some attention is paid to their requirements.

TEMPERATURE

The word "Intermediate" following a heading of the plant lists, means these plants do best in a house whose minimum temperature is 55° to 65° at night. A night heat of 55° as a minimum on extreme cold nights, and 60° in moderate weather will be better for the plants than a higher temperature, especially if they are in bloom. 60° or 75° by day, or a few degrees more with sun heat and ventilation is good, and in summer as low as outside conditions will permit. "Warm" means a minimum temperature of 65° to 75°. "Cool" means a minimum temperature of 40° to 55°. We have indicated in each case the type of house each variety prefers, but this is not an absolutely hard and fast rule, for we

have repeatedly seen gardeners successfully growing mixed types in one house by the careful utilization of the various parts of the house for individual plants that need the cooler end or the warmer end, conditions that are soon discovered by the observant grower.

AIR

Air must be given at all times when possible. The house must have free air, day and night, from May to September, and at other times as much as outside conditions will permit. At no time should the air of the house be permitted to get stale or musty. Oftentimes a small crack of air will prevent this. The more air used, the more water will be required, as the stagings and walks should be kept moist to maintain humidity.

WATER

Orchids want a fairly moist atmosphere, which means a humidity of 70° or more. This can easily be obtained by watering between the pots and damping the walks and under the benches once or twice a day, according to weather conditions. A hygrometer or simple and inexpensive device which records both temperature and moisture, will greatly facilitate this, and is a safeguard against excessive changes in humidity, especially during fall and winter.

In winter, water is best given to the plants in the morning so that the surplus will dry off before night. It is impossible to lay down any hard and fast rules for watering. It is a very important operation, and skill is acquired by practical experience, connected with a knowledge of the general conditions surrounding the plants in their native homes. As a rule, most orchids need a liberal supply of water while growing, but the condition of the plant, the compost, and the manner in which it is potted, have something to do with this. Newly repotted plants should be watered sparingly for several weeks, ailing plants, or plants in old compost, which is more apt to hold water, should be watched carefully. It is certain that when rainwater is saved for watering the plants they show more vigor.

On cold, clearless days, when the temperature is below normal, very little watering or damping is needed, and unless it is some particular species which cannot endure drying, it is safest to withhold water; otherwise the plants will be surcharged and those with weak constitutions or immature growths will be liable to damp off or rot. A close, stagnant atmosphere is always to be avoided. In the summer the air is very drying and the plants benefit greatly from frequent light overhead spraying two or three times a day.

A scene of six and seven inch plants in one of Riverview's large houses.
Each house contains 10,000 to 12,000 plants.

We must again call to the attention of amateurs their most common error—overwatering the epiphytes, and especially the Cattleyas. These want spraying overhead each bright day, even two or three times in warm dry weather, but water on the compost should be applied only as indicated under the section devoted to Cattleyas. Give them a good drink about twice a week. Do not rest the plants in saucers, and if they are on a bench be sure there is a crack beneath them so that the surplus water will drain off.

SHADING

From early February to late October shading must be provided. Outside roller blinds are far superior to any other method for they may be left up on cloudy or dark days, or raised in the afternoon when the sun is low, and thus the plants benefit greatly from the increased light. They are also a protection against hail. However, satisfactory results can be obtained by shading with white lead and gasoline, which should be applied very lightly, just enough to exclude the direct rays of the sun. Cheesecloth stretched a few inches from the glass will provide a heavier degree of shading for those species which require it, such as *Cypripediums*.

In a house having full exposure to the sun in winter, orchids will need shading to some extent. Even in a very small greenhouse there exists plenty of opportunity for variations in shading, enough to suit individual plants by placing upon shelves or near the glass those which require much light, and putting those which require more shade on the less exposed side of the house. The observant grower will find even a slight change of position in the house will often bring about marked improvement in growing conditions for a plant.

POTTING

Species bloom at stated season, but the hybrids are of irregular habit, due perhaps to their mixed origin, they blossom and need repotting throughout the year. This makes it difficult to make a rule for potting, but the best time is after flowering or when they start to make their new collar roots. However, many orchids should not have their root action disturbed and should not be repotted each year. Three rules generally cover this: (1) when the compost decays, (2) when the plant does not thrive due to faulty drainage, (3) or when they have outgrown their pots.

New pots should be thoroughly soaked prior to using and old ones thoroughly cleaned. Using a five-inch pot as an example, increase the drainage hole to about one inch in diameter with the head of a hammer. Place a large piece of crock over this

Scene in Riverview's Work Room

hole in such a manner as to allow good free drainage, and fill the pot with potshreds to about two inches. All orchids should be potted very firmly. Use a sharp-pointed hardwood potting stick and work the compost towards the center, packing it in as hard as possible. When finished off, compost should be about three-quarters of an inch from the top of the pot, then neatly trim with the shears all protruding pieces of fiber. This is recommended proportionately for all pots.

Care should always be taken not to overpot, for if the compost remains wet in the center it causes the osmunda fiber to decay, and the roots rot. All newly potted plants should be kept on the dry side until root action begins. Syringing is most beneficial at this time.

CATTLEYA

(Intermediate)

The best potting material for Cattleyas is osmunda fiber. With these and their allied genera, it is almost impossible to force the compost into the pot too firmly. Place the back bulb close to the side of the pot, so as to allow the leading growths plenty of room. Always plan to have a pot large enough to take two years' growth. This can easily be estimated from previous growths. After potting the plant should be staked. Galvanized wire is recommended, for if bamboo or other wood is used, it will generally rot before time for repotting; and this necessitates restaking. Cattleyas love the light and should have as much as possible, short of direct rays of the midday sun.

The adult plants of the Cattleya genera should not be watered until the compost in the pot has become quite dry; this cannot be easily ascertained by feeling the top surface. The best practice is to lift the plant, and if it is light give it a thorough soaking, then do not water it again until it is well dried out. Always remember that the easiest way to kill plants of the Cattleya family is to overwater them. On bright, sunny days syringing with a fine mist spray is beneficial. Hybrids are usually of much easier culture than many of the species and the flowers are superior.

CYPRIPEDIUM

(Intermediate)

Cypripediums should be kept moist at all seasons, with the exception of the newly repotted plants, which should be kept somewhat on the dry side. They should not be dried out between waterings to the extent of the Cattleya genus. They require a moist atmosphere, and should be shaded from the direct rays of the sun at all times. Extremely weak applications of liquid cow manure are beneficial during September and October.

Compost should be straight brown osmunda fiber. The Cypripediums should be repotted every two years right after flowering.

ONCIDIUM

(Intermediate)

Compost—coarse osmunda fiber with ample drainage. When in active growth an abundance of water and light is beneficial. After growths have matured, water should be retarded until flowering spikes appear. (Note: *Oncidium splendidum* should be dipped weekly after growth is two inches high. After flowering they should be severely dried off and only syringed, or premature and weak growths result.) Many of this species do well suspended from the roof.

PHALAENOPSIS

(Warm)

Compost should be brown osmunda fiber in special baskets, or pots with numerous holes in the sides and bottom, and a large amount of broken crock, so as to allow ample drainage. Never allow the plants to dry out. Repot as often as the compost becomes soft or stale, and allow the roots to protrude. During active growth they want a liberal supply of water and careful early morning spraying, with the atmosphere always moist, and enough air so that the same does not become musty. The plants require much light but cannot stand the direct rays of the sun. North and east exposure is recommended. The plants should be hung, or placed on the top of a high bench.

DISEASES AND INSECTS

WET-ROT is brought on by an over-moist or stagnant atmosphere, and is usually detected by a semi-transparent appearance of the parts affected, which soon become dark brown. If noticed at the commencement, it can be readily checked by slitting the outer skin with a sharp knife, and removing the plant to a more airy position for a few days.

DRY-ROT is caused by a fungus which attacks the rhizome of the plant. It is often produced by burying the rhizome, or base of the plant, in the compost. Cypripediums are susceptible to it. Large healthy growths, when attacked, show a sickly pale color in the foliage. On examination of the base, it is found discolored or of light brown appearance. If the affected portion is quickly removed with a sharp knife, it will usually give no further trouble; otherwise, it will spread and destroy the plant.

SPOT. The appearance of small, dark brown spots on the leaves and pseudo-bulbs is usually an indication of cold and overwatering. The affected parts should be slit with a sharp knife, and a mixture of charcoal and sulphur rubbed on the wound.

THRIP and SCALE. Frequent syringing with a nicotine insecticide, with soap added, will control these pests. It is good practice to use this insecticide fortnightly as a precaution. Use a fine nozzle and apply all force possible.

CATTLEYA BEETLES. These can be controlled and, in fact, eliminated, by systematically spraying with Rotenone and Derris Root Insecticide to which soap has been added.

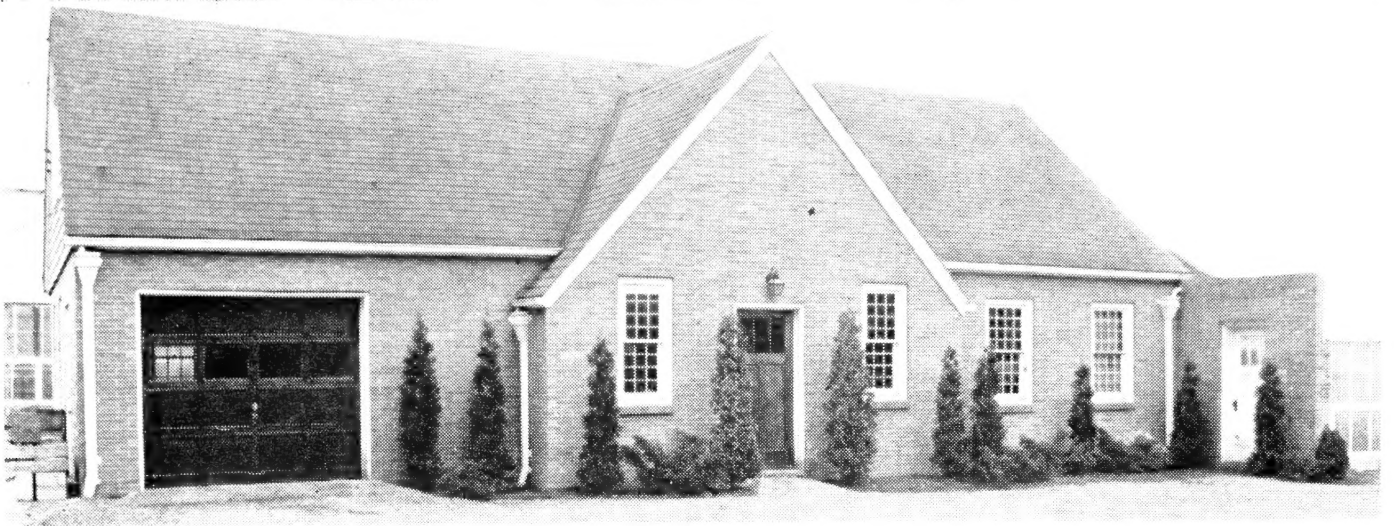

SNAILS and Garden Slugs are one of the worst pests. As they do their work at night, many people fail to account for the damage done to young shoots, roots, and flower-buds. **KILSLUG** placed on the benches in the late afternoon will attract them, and they will be found dead in the morning.

HOUSE CULTURE

There are a number of varieties which grow successfully in dwelling houses, and those recommended are Cattleya and its multigeneric hybrids, and Cypripediums. While the conditions are apt to be dry and more or less subject to drafts, they will thrive very well if one keeps the foregoing directions in mind—particularly relative to night temperature and humidity—and uses a fine hand spray on the foliage on bright days. The use of a metal tray under the plants filled with pebbles and kept damp will greatly assist in keeping the air moist around the plants.

CONCLUSION

The amateur can grow healthy plants and enjoy beautiful flowers in his leisure time if general directions are followed. Many of the chances for failure can be eliminated by precautions taken upon acquiring plants. Buy only established plants of strong, healthy growth and free from disease and insects at the outset. Keep your plants clean, learn the simple rules for temperature, ventilation, watering, shade and light, and your efforts are sure to be crowned with success.
